Himanshu Himanshu

Data Science Student | Machine Learning Enthusiast

• **+1 862 445 4511** • **himanshuberi1606@gmail.com** • **Newark, New Jersey, USA** • **Linkedin** • **Website** • **GitHub**

Professional Summary

Data Science Master's student at NJIT with expertise in Python, SQL, and data visualization. Enhanced cybersecurity measures by analyzing 100K+ log events weekly and achieving a 30% increase in detection accuracy. Leveraged data insights to drive a 15% sales boost through optimized reporting and visualization tools like Power BI.

EDUCATION

Master's of Science in Data Science Sep 2025 - May 2027

New Jersey Institute of Technology Newark, USA

Bachelor's of Technology in Computer Science Apr 2024

Punjab Technical University Mohali, India

SKILLS

- **Cloud, DevOps & CI/CD:** Amazon Web Services (AWS), Microsoft Azure, Google Cloud (GCP), Docker, GitHub Actions, CI/CD Pipelines, Azure App Services
- **Machine Learning & MLOps:** Machine Learning, End-to-End ML Pipelines, Model Deployment, Scikit-Learn, TensorFlow, CatBoost, XGBoost
- **Big Data & Data Engineering:** PySpark, Apache Hadoop, Apache Spark, Apache Kafka, Apache Hive, Data Analysis
- **Programming & Web Frameworks:** Python, SQL, Flask, Pandas, NumPy, SciPy, Matplotlib
- **Databases & BI Tools:** SQL Server, MySQL, Power BI, Advanced Excel, SSAS, SSIS, SSRS
- **Developer Tools:** Git, GitHub, VS Code, PyCharm, Anaconda, Google Colab

CERTIFICATIONS

- **AWS Certified Cloud Practitioner | Amazon Web Services| Udemy |** Completed **14 hours** of technical training and hands-on labs focused on AWS Management Console
- **Machine Learning & Deep Learning Bootcamp | Udemy|**Engineered and deployed **5+ end-to-end Machine Learning models** using Python , Scikit-Learn , and Tensorflow

EXPERIENCE

Teaching Assistant, Mechatronics Mar 2026 - Present

MakerSpace, NJIT Newark, New Jersey

- Conducted lab sessions, graded assignments, and provided academic support to students.
- Resolved hardware & software issues with basic circuit components in lab environments, preventing experiment failures & minimizing downtime for researchers to enable timely data collection

Student Assistant, Operations & Data Nov 2025 - May 2026

Profeta Center, NJIT Newark, New Jersey

- Optimized logistics tracking for events, workshops, & startup sessions using Microsoft Excel, facilitating improved event planning by enhancing data analysis of participation metrics
- Enhanced decision-making processes by constructing & maintaining Excel-based spreadsheets, reports, & dashboards to effectively monitor daily operations & startup engagement activities

SOC Analyst Intern, Managed Detection & Response Feb 2024 - Apr 2024

Aujas CyberSecurity Gurugram, India

- Analyzed 100K+ security log events weekly across network and endpoint environments, contributing to a 30% increase in threat detection accuracy.
- Monitored real-time SIEM alerts and performed triage on security incidents in a 24/7 Security Operations Center (SOC) environment to mitigate potential cyber threats.

PROJECTS

Student Performance Predictor (End-to-End ML & Azure Deployment) Feb 2026 - Apr 2026

- Repository: github.com/BeriHimanshu/Generic_ML_Project | Live Demo: Azure Web App
- Architected a modular end-to-end ML pipeline in Python (src/), decoupling data ingestion, feature preprocessing, and model training for maintainability.
- Trained and hyperparameter-tuned multiple ML algorithms (CatBoost, XGBoost, Scikit-Learn) with automated artifact tracking for model binaries.
- Containerized the Flask web application with Docker and configured automated CI/CD pipelines via GitHub Actions (.github/workflows) for zero-downtime deployment to Microsoft Azure App Services.

Microsoft Stock Price Forecasting | Machine Learning Developer Oct 2025 - Nov 2025

- Developed a stacked LSTM model (3 layers, 50 units each) to forecast Microsoft stock prices using 15+ years of historical data
- Processed and analyzed 5,000+ time-series data points, applying MinMaxScaler normalization to improve model convergence
- Engineered input sequences using a 100-day sliding window, enhancing the model's ability to capture temporal dependencies
- Repository: https://github.com/BeriHimanshu/Time-Series-Forecasting-Using-Stacked-LSTM
